KELSEY SERVICE NURSERY

Highlands, N. J.

(formerly New York)

Established 1878

Highlands 3-1439 (Office Only)

Cut along dotted line—order form on reverse.

To Our Customers:

As we operate differently from most ordinary nursery companies, we think you may be interested in knowing our method.

Like most nurseries today, local or mail-order, most of our stock is grown for us by wholesale growers. Unlike most other nurseries, we do not first have it shipped to a central shipping and storing plant, or set out in a local display nursery—we have it shipped direct from the grower to you. This is considered "old-fashioned" and it does have its difficulties. For example, weather sometimes interferes with desired shipping dates; also sometimes several shipments must be made instead of one, as wholesale growers usually specialize in a few kinds only.

The advantages, however, we think outweigh the difficulties. (1) The stock, most of it dug specially for your order, shipped at once, is fresher and more vigorous; (2) Costs are lower, since only one shipment has to be made, and no storage; (3) Many more rare kinds can be offered (Ordinary nurseries stock only kinds where a large mass sales can be expected.)

You deal only with us and we are an entirely responsible source of supply. We ask confidently for your orders; we try hard to furnish good stock, and to be more than fair if anything goes wrong—which is seldom. Our liberal guarantee is given on the next page.

Kelsey Nursery Service

P. S. This small autumn price-list covers less than half the kinds we have available. Write us for prices on anything you don't see—our large spring catalog will be mailed you next February.

IS IT HARDY IN YOUR GARDEN?

There is a northern limit for every plant, beyond which it cannot live. For practical use the map at the left divides the country into Zones. Each plant description in this Guide has a related Zone limit. Look up your garden on the map and you can select hardy material.

BETTER GARDENING

by Laurence Manning

Thousands of gardeners have found this basic book of "more real help than a shelf of cyclopedias." "Very helpful," "exciting as a novel," "certainly no other book exists like it," "unlocks the doors and makes everything simple and understandable." If you have been confused by the complex rules and instructions in ordinary garden books, you will find here quick, sure enlightenment. Yet expert gardeners, even more than beginners, are writing about this book's surprising usefulness.

Don't deny yourself this small purchase—
"pays for itself ten times over."

ORDER THESE NATURAL FERTILIZERS:

Freight extra on arrival—\$1. to \$2. per 100 lbs., within 300 miles.

50-lb. Bags **Shredded Cow Manure**, each \$2.00
Well rotted, can be applied as a direct mulch. Feels dry. (Covers 150 sq. feet.) Excellent soil conditioner.

50-lb. Bags **Mulchnur**, each \$2.50
Contains peat-moss, manure, and enough tobacco dust to discourage cutworms, moles, etc. Fertilizing value is high. Clean, dry, shredded, ready to use. Lawns: Use 1 pound to 10 square feet. Beds, etc.: 1 pound to 2½ square feet.

50-lb. Bags **Hyper-Humus**, each \$2.00
Peat, screened and bagged, full of soil bacteria. Fine for Rhododendrons, though only slightly acid.

Easy to Plant
and Care for

Native ARISTOCRATS

Rhododendrons low as 37½c, in few years, with little care, will be bushy \$10 specimens.

SIZE 2: As Small as Looks Shapely.
12 to 15 in. B&B. Clumps, 4 to 6 Stems.

These "Junior Specimens" weigh about 5 pounds per plant, individually burlapped. They are 2 years older than Size 1. Express runs about 25 cents per plant. You can expect some blooms the year after planting. These really "look like something" the day they are planted.

OFFER A: 1 each of above 5 plants for \$9.25 postpaid.
OFFER B: 5 each of above, 25 plants, for \$30. (express about \$5.)

SIZE 3: Bushy, Heavy Clumps.
1½ to 2 Feet, B&B.

Most are budded for at least some immediate bloom. Large enough to use at once for foundations, shrub borders. Allow about 3-ft. space, which they will fill within next few years. \$4.50 each, singly.

Any five of the 5 kinds pictured below for \$16.75. (Express costs about \$5.00 for the 5.)

SIZE 1: AS SMALL AS CAN BE SHIPPED SAFELY.
12 inch seedlings (1 stem) with a small ball.

This special "Young Aristocrat" grade measured 12 to 15 inches dug with a little earth left on roots, but not burlapped. Plants weigh one or two pounds only. This stock is not to be compared for a minute with ordinary collected plants. It is on the contrary all carefully dug, the greatest pains being taken to preserve the roots. Carefully packed, it is easily planted and makes a quick start. Shipped from North Carolina, express runs only about 8c each (in 100 lots).

LIVING CARPETS

VINCA (The Myrtle)

The most satisfactory, showy, trouble-free of all ground covers. The leaf is small, shiny, dark green all year round. Even in full shade, the leaves grow thickly. It spreads by underground roots. To be sure of coverage within (say) 2 years, we recommend spacing 15 in. apart. There are blue flowers, showy and cheerful, all spring long and the plant will grow and thrive in any soil including barren sand or clay banks. **Planting**—Clumps come tied compactly. Untie and spread out when planting. (25) (100) (1000)
Strong clumps\$4.50 \$13.00 98.00

. . . plants that cover the ground where grass will not thrive . . .

Eventually one plant will cover a large area, but on banks it is important to get the soil held quickly. We suggest bad steeps be planted 12 inches apart each way—gentler slopes 1½ feet, except as noted on descriptions.

A—Seedlings or Rooted Cuttings

Must be shaded first two years. Planted 2" x 2", lath-house holds 432. After two years, must be transplanted into next grade

B—Once Transplanted Grade

Grown as above, or bought. (Our 2 yr. and 3 yr. Azaleas, e.g.) Space about 5" x 5" (80 in the lath-house pictured). Shaded first year, but the second year shade omitted except in drought. In 2 years, now twice transplanted (“XX”), usable as hedge plants, for bedding, etc.

C—Twice Transplanted Grade

Can be moved into open, spaced 9" x 9" (nursery pictured holds 104) and left two years. They are “shaped”; straggly branches lopped off with sharp knife. Cultivate, fertilize, water, no shade needed. After 2 years, they are XXX (three times transplanted), bushy and shapely.

D—Specimens

Every garden needs some larger, well formed plants. Such specimens are grown 2 or more years spaced 18" x 18" (nursery pictured holds 32).

HERE ARE THE BEST LIVING FENCES

Many plants can be made into hedges, including the much advertised *Rosa multiflora*, Privets and barberry (all priced on page 9) but Hemlock and Yew are far the best of all. The XX sizes of hemlock can be put in hedge row—smaller should be bedded two years first.

(below) 12-15 inch Hemlock newly planted, and (left) how it looks 8 years later.

HEMLOCK HEDGE

Tsuga Canadensis (Northern Hemlock). 60 ft. Zone III. In forests, a majestic patriarch, but readily sheared to hedge or modest specimen sizes. Humus. Stands shade. The most beautiful native evergreen.

Hemlock Hedge when properly sheared gives a fine, even, smooth dark green surface unlike any other hedge. Thrives in soils ranging from ordinary to damp, and from full sun to full shade, hence is easy to grow. Set plants 1½ feet apart.

ROSA MULTIFLORA "FENCE"

No repairs, no maintenance problems, it just grows. No animals can get through, yet birds and small game can use it for refuge. It does not get out of hand, kept 5 feet high, width 8 feet. (Not for small gardens.)

Plant a single row, 1 foot apart. Cut back roots to 8 inches, tops to 3 or 4 inches on planting. Mulching is very beneficial—leaves, hay, sawdust, or whatever you have. Effective in three or four years, mature in seven.

PLANTING BABIES

PLANTING — The first thing is to keep the package moist. Only when the planting bed is ready do you open it, and even then remove only one plant at a time from its wrapping to plant it. This is particularly important with evergreens, but good sense with all plants. The quicker the better — twenty seconds per plant is average.

SOIL should be loose and friable, and absolutely must contain some humus. Add peat moss if necessary.

SHADE must be provided for a newly planted young evergreen. Usually only for the first summer, but very young ones need it for two summers. Deciduous trees, shrubs and vines need none.

WATER is usually critical the first week or two. Soak thoroughly when planting. Then again the next day. After that do not water oftener than once a week. But you can spray the leaves a few seconds at a time if the weather turns warm.

It's easy! Plant 'em,
prune 'em, water 'em—
Nature does the rest!

RHODODENDRONS

Evergreen shrubs with fine foliage. Range from dwarfs to giants. Bloom from May to July. Acid, humus, damp, loose.

1. The roots feed at the surface — do not hoe or rake. Plant them properly and thereafter water and mulch as needed.
2. Light shade, airy and open, gives best results. Only certain trees will do. The best are Oaks, Cherries, Magnolias and Birch. Their leaves make the best mulch. Avoid Beech and Maple.
3. Safe planting in Sept. and Oct.

NATIVE RHODODENDRONS

maximum, white July
carolina, pink May
catawba, purple June
See page 9 for prices and descriptions.

NAMED GRAFTED HYBRIDS

The following are from open field, dug with ball of earth. They have been pinched to make low, shapely branching, thus overcoming the common fault of grafted rhododendrons which is to grow leggy. All hardy Zone VI, and a few extra hardy ones as noted in Zone V.

Bagshot Ruby—Dark crimson.

Boule de Nieve—Snow-white dwarf.

Caractacus—light crimson. Zone V.

Catawbiense album — the finest white. Zone V.

Catawbiense grandiflorum — large lilac. Zone V.

Dr. Dresselhuys—Tall, vigorous red.

Dr. H. V. Rutgers—rich dark red, compact. Zone V.

E. S. Rand—Compact scarlet-red.

Lee's Dark Purple—rich color.

Old Port—Plum color. Zone V.

Roseum elegans—bushy rose pink. Zone V.

HYBRID SEEDLING RHODODENDRON

These in every way resemble named hybrids except: — the color of flowers is unpredictable. However, more than half are really bright. The others are purples. They are fairly free to bloom, hardy mostly in Zone V.

* 4 to 6 in. XX....10 for \$8.50, 100 \$ 60.00
12 to 15 in. B&B..5 for \$20.00, 100 \$300.00

Dwarf Native Hybrids

Two handsome, hardy (Zone V) bushy dwarfs, reach 4 ft. spread. June.

Wilson's (laetovirens)—rose.

Myrtifolium—good pink.

12 to 15 in. B&B \$6.50 each
18 to 24 in. B&B \$12.50 each

EVERGREENS IN FALL

All are easily planted in September and October — the Yew is particularly easy even in small sizes. No fertilizer until next spring, but water well once a week to freeze-up and mulch smaller sizes unless already in shady locations.

Thuja (Arborvitae)

— *occidentalis* (American Arborvitae). 30 ft. Zone II. Pyramidal tree with dense, frond-like, evergreen leaves, popular.

Huge Hybrid Blueberries

Really beautiful as specimens or in hedges. Suited for use in small quantities in the small garden. A 100-foot hedge will pay about \$25 worth of berries a year! (Spaced 18 ins.)

Why Wait! Plant Some NOW!

And enjoy the berries sooner. Not only will they add to your garden but each bush will pay for itself many times over! Hardy throughout U.S.A.

✓ **Atlantic**. Very vigorous and productive. Extra large, good color, firm. Late.

✓ **Concord**. Hardy, upright, midseason. Fine quality. Large.

✓ **Jersey**. Large, vigorous. Hardest. Early July.

✓ **Pemperton**. Vigorous bush, large berries. Midseason. Firm, slight aroma.

✓ **Rancocoas**. Early, good quality.

✓ **Stanley**. Large berries, early July. Tall vigorous bush, thick glossy leaves.

✓ **Burlington**. Good shipper. Large. Later than all others.

✓ **Weymouth**. Earliest of all. Dark berries, best used for cooking.

Set the plants in beds 4 feet apart each way. Several varieties should be included in every planting, as an exchange of pollen is necessary to produce good crops of berries. Or order "mixed" if you wish—we will assort for good pollenization. All varieties are almost equally fine.

Blueberries require an acid soil containing peat or other rotted vegetable matter. They need a moderate supply of soil-moisture, and good drainage so that the roots can get air during the growing season.

Amazing loads of fruit on Dwarf Tree.

Dwarf Fruits

A tree whose fruit is as large or larger than ordinary, but which never grows very tall—perhaps ultimately 12 to 15 feet. Space 12 feet apart.

A dwarfed tree can be sprayed, pruned and picked by hand without ladders, equipment or professional skill. It bears much earlier in life, in its third or fourth year at latest—often earlier—and carries amazing loads of fruit. Dwarfed fruits (especially Plums and Peach) are less liable to borers and other pests.

PRICES: All kinds listed below:

1 year—Not branched	\$2.60	Add 50¢ packing on orders under \$10
2 year—Branched	3.90	
3 year—Heavier	5.25	

All three ages are about the same height. Most are 3 to 4 feet high, but apples often are still dwarfer. If extra dwarf apples wanted, specify Malling 9.

Many fruits do not bear good crops if planted separately. Pollen from nearby trees of different variety is often needed. Noted on these pages by:

•—self-unfruitful. Do not plant by itself, but always with another variety of the same fruit.

(P)—good pollinizer.

Ten to twelve feet is the maximum height to which true dwarf Espaliers will grow. little pruning is needed—beyond keeping the small new spurs from reaching more than six inches outside of the main stems. When a spur has borne it will continue to bear. Pick the stem with the fruit.

Peaches are an exception: fruit grows only on last season's wood. Keep two spurs coming at every four inch interval along the stem. In March, prune one back and let the other fruit. Then, when fruited, cut it back and from the other by then there should be two new ones for the following year's crop.

Watering and fertilizing are unnecessary except in very poor soil indeed. Spray for disease as with any fruit tree.

In planting against a wall, place the tree six inches away and allow 18 inches root space—requiring a space in all two feet out from the wall.

TWO RARE FRUITS

➤ **Atlantic Queen Pear** — succeeds under the most adverse conditions, including seashore. Extra healthy. Immense, yellow green, juicy, aromatic, melting flesh. 2 yr. dwarf \$7.50.

➤ **Mirabelle Plum** — Small, round yellow fruit, much esteemed in France. Unique, pleasant flavor. Stone free. Firm, tender, mild flesh. 2 year old dwarf \$7.50.

Grape Culture calls for plenty of humus in the soil. Old manure is far the best form, to produce vigorous spring growth. Extra moisture is needed as fruits fatten in summer.

Hybrid Grapes

High quality grapes on far less vigorous (and less troublesome) vines.

No permanent canes needed; only a short trunk or shank. Grapes grow on new wood, which is pruned away each year.

Most kinds bear about Concord time. Bacco, Florence, Angele are perhaps two weeks earlier. Siebel 14 and Jacques Wolf, a week later.

North American grape vines yield an unpleasant foxy flavor, tough skin, coarse seeds, and other inferior qualities that make them undesirable either as table or wine grapes.

The European Grape (*Vitis vinifera*) is far superior to our native grapes. However, it has not the stamina to withstand sub-zero weather and succumbs disastrously to diseases, while our hardy native grapes remain immune.

Breeders have produced varieties that combine the best qualities of both species to produce the ideal grape vine: namely, resiliency to our cold climate and diseases; absence of all foxiness, as with the old Concord. These Hybrid Grapes possess a pleasant sweetness and a certain native fruitiness, that makes them in many respects far superior to the California as either fine table or excellent wine grapes.

They lend themselves to Spur pruning. This quality simplifies the pruning and care of the vines and permits one to easily train them into permanent pleasing patterns. They can be grown even on a six foot pole, to produce from 10 to 30 pounds of luscious grapes. The clusters are of immense size, some of the varieties have as many as 150 big clusters the second year planted.

PERENNIALS that Prefer FALL

Some perennial plants seldom succeed with spring planting; others (like early spring wildflowers) take spring planting reluctantly—really do far better in fall. On these pages most kinds that ought to be fall planted are listed. (In addition most ordinary perennials will succeed in fall as well as in spring, and may be ordered from our spring 1954 Short Guide.)

MODERN BEARDED IRIS are exciting, bright, clean colors . . . are huge, with often several flowers to a stem. They are nothing at all like old-fashioned German Iris of even twelve or fifteen years ago. The best of the new ones as they come out sell for very high prices, but when available in quantity the price drops. PERENNIALS last for years in the ground. One plant in New England has been recorded at four generations.

HARDINESS is sufficient to grow most kinds up to Zone IV. Extra hardy sorts include: Aquilegia, Campanulas, Dianthus, Delphinium, Hemerocallis, Iris, Lilium, Peony, Phlox.

TREE PEONIES
\$5.50 each

Because of their novelty and great beauty, Tree Peonies are rapidly becoming one of the most desired plants. They bloom earlier than ordinary Chinese Peonies and their flowers are of immense size. These plants are established in 5 inch pots and can be moved safely at any time.

Archiduc Ludovico. Enormous flower, flesh pink.
Athlete. Double glazed mauve, shaded rose.
Baroness d'Ales. Vivid salmon-pink, deeper in center.
Jules Pirlot. Satiny-pink, flushed carmine.
Reine Elizabeth. Brilliant salmon-rose.
Souv. de Ducher. Reddish-violet with silvery reflex.

Brownell

(SUB-ZERO)

Roses

The result of long research, these roses have unusual hardiness, and improve with age, rather than slowly deteriorating like other roses.
